1987 Annual Production Statistics Report

CRUDE OIL PRODUCTION - 1987	**781 806.0 m^3**
AVERAGE DAILY PRODUCTION - 1987	**2 141.9 m^3**
TOTAL CUMULATIVE PRODUCTION - December 31, 1987	**25 629 975.8 m^3**
WELLS ON PRODUCTION - December 31, 1987	**1 434**
WELLS CAPABLE OF PRODUCTION - December 31, 1987	**1 624**

New Users

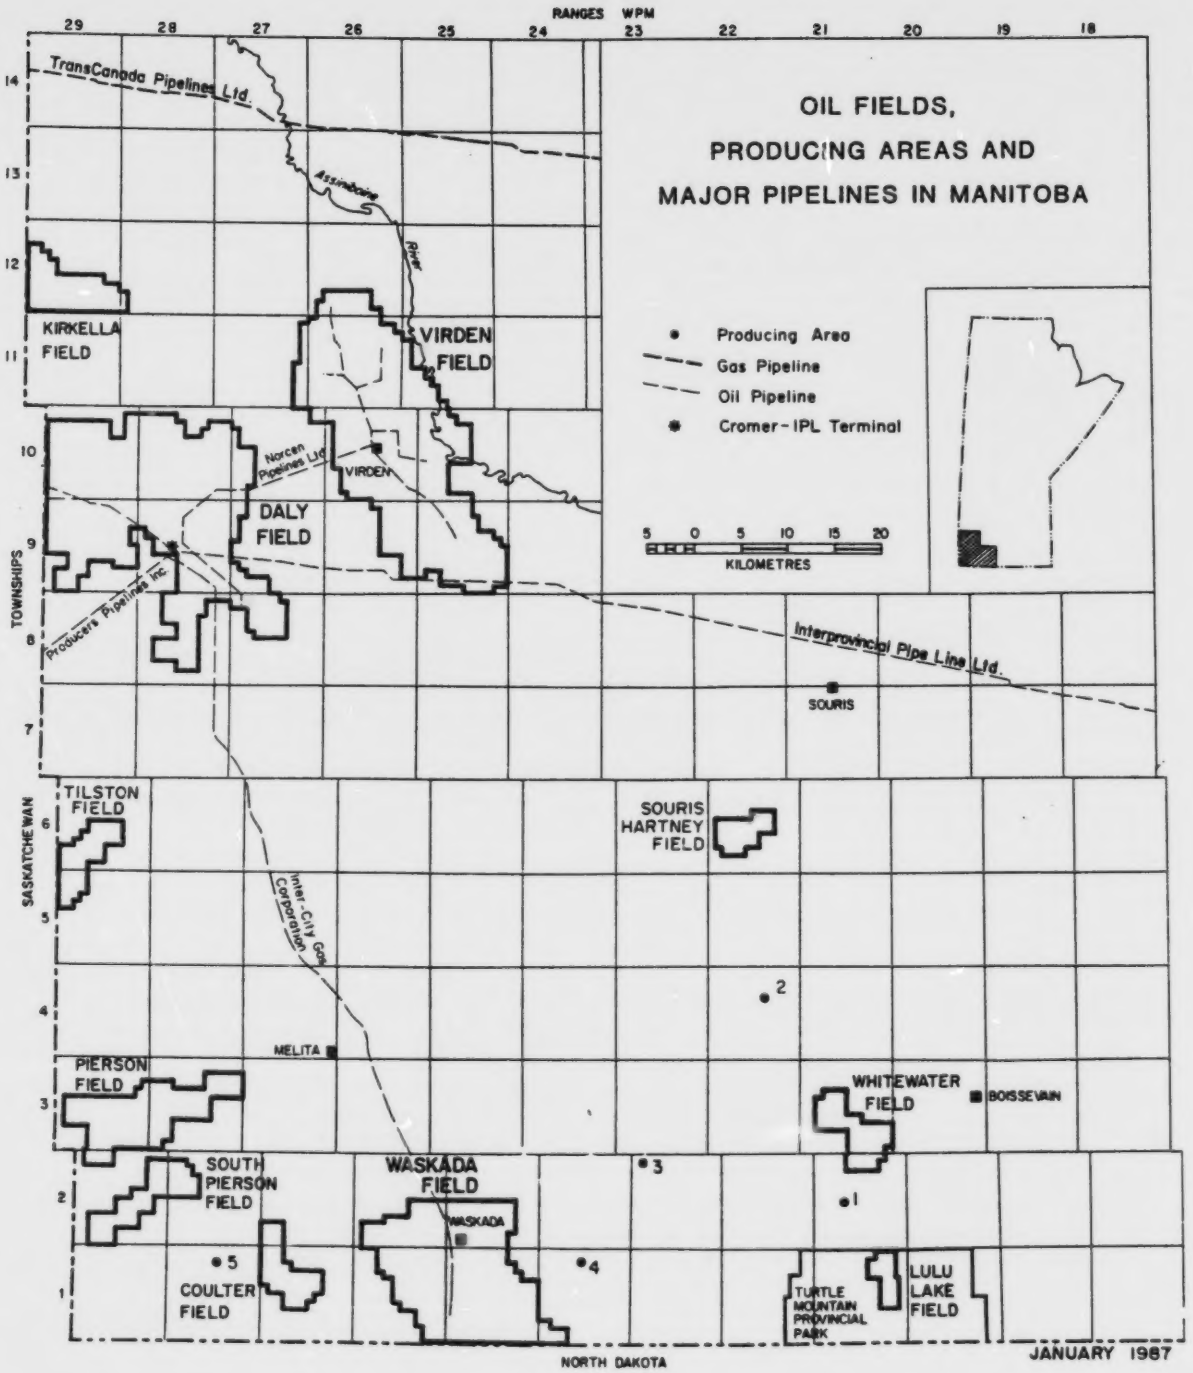
The Annual Production Statistics Report is printed in a field/pool code format. That is, all wells are grouped by the field in which they are located and by the pool from which they produce or to which they dispose or inject. Within each pool unitized operations (listed numerically) are shown first followed by the non-unit wells within the pool, grouped by operator (listed alphabetically). The field/pool designations used in this publication include amendments to those pools officially designated as of January 1, 1987 and new pools not yet officially designated. Users familiar with the pre-1983 format can use the map and table on the following pages to cross-reference the previous field designation with the field/pool code format.

Throughout the publication the oil production figure is shown immediately above the salt water production figure. All volumes are expressed in cubic metres.

All production from confidential wells is shown as a total number only. Individual confidential wells are not shown.

A Pool Location Map, at a scale of 1:125 000, showing all designated Fields, Pools and well locations is available from the Petroleum Division, Manitoba Energy amd Mines.

Should you have any questions or comments about this publication please contact Brad Thiessen at (204) 945-6571.



OTHER PRODUCING AREAS

1. Mountainside
